Ideal for either study, home reference or holiday planning, this new topographical chart of New Zealand’s South Island is created from the latest digital cartography. The combined use of layer-coloured contours with hill-shading gives a superb representation of the landforms and physical features of the South Island. In addition, the easy-to-read place names and symbols allow cities and towns, mountains, rivers and lakes to be clearly identified. Special features of this map are the inclusion of additional Maori name forms that are in common use today, together with the locations of National Parks. There is also excellent coverage of the main transport network across the South Island - roads, railways and airports - making this map particularly useful as a travel guide. Philips New Zealand South Island Reference Map is supplied in two versions: (a) laminated on both sides and rolled into a clear plastic tube for use as a wall map and (b) un laminated and folded with a tipped-on card cover for use when travelling.

Main map scale:

- Philosophical Treatise Xxi Century
- Philanthropy and the Nonprofit Sector: An Introduction
